

I am deeply concerned about the data power line filing. I presently live on 5 acres of ground and experience powerline interference. I fear interference from the data as well, since I have a powerline drop that provides power to my home. I do not understand how I would not be interfered with, nor how I would not interfere with my neighbors. Please reject this proposal all together and consider the tests that have been or being conducted as sufficient reason not to continue. I would also add the question, "At what point is the data distribution market saturated/"

Thank you for your time in this matter.
